Understanding Linear and Quadratic Functions

Before diving into *ejercicios de funciones lineales y cuadráticas con respuestas*, let's establish a solid foundation. Linear functions are represented by the equation $y = mx + b$, where 'm' represents the slope and 'b' represents the y-intercept. They create straight lines when graphed. *Ejercicios de funciones lineales* often involve finding the slope, the equation of a line given two points, or determining whether points lie on a specific line. These exercises are fundamental and form the building blocks for understanding more complex mathematical concepts.
